Demonstration model of Emerising Machine TSM

- for emerising woven and knitted cotton, cotton-polyester blends and synthetic fabrics

Machine description

Stable and torsion-free machine-frame construction, equipped with 5 individually powered horizontal emerising rollers, 230 mm in diameter. Direction of rotation of rollers can be reversed in order to obtain a so-called grain-grain-/cross-grain emerising effect.

Each roller is fitted with 12 ledges covered with industrial strength sandpaper. The special set-up enables replacement of all 60 ledges within 30 minutes. The ledges and emerising rollers are beating to optimise the results. The set thread-up degree is indicated on scales.

Fabric tension is adjusted through gears at fabric feed and fabric outlet. These gears are set at switch-board and driven by servomotors. A diagonal monitor indicates the setting of the gears.

The emerising rollers are covered by three layers of plexi-glass. A dust collection container with lateral outlet is fitted underneath the rollers.

The machine can be adjusted at a central control panel. The motors driving the emerising rollers can be controlled individually.

Working speed 5 – 25 m /min.

Electrical connection: 32 kW, 400 V, 50 Hz

External finish: plastic metal bond paint

RAL 5007 / RAL 7035

Accessories

- lateral changing device
 - automatic seam lifting
- 6 bar compressed air pressure required
- additional emerising roller to finish the fabric
backside., driven by separate 5-kW-motor
 - plaiting arm

Price working width 1800 mm new model € 88.480,00

Special price for demonstration model € 60.000,00
